The chart illustrates the grams per hour (G/h) of emissions for different types of wood combustion appliances. The emissions range from 1.2 G/h for an EPA certified Pellet stove to 47 G/h for a fireplace with firewood. Other appliances include:

- Outdated uncertified woodstove: 42 G/h
- Fireplace with manuf. firelog: 9.6 G/h
- New EPA-certified woodstove: 6.0 G/h

The chart visually compares these emissions, with the height of the smoke column representing the emission levels.
